Package Price		£ 5,799 +VAT

* Requires standard analogue telephone line, analogue telephone handset and cable set. Phone and cable set available from us for £25

This package provides an ideal small scale radio studio for Intranet, Internet or FM/AM broadcasts. The system includes a small but flexible mixing desk, presenter & guest microphones, it also includes a rack mounted playout PC and over £7000 worth of professional broadcast radio software in the form of the Myriad Payout system used in Radio Stations of all sizes around the world. All this, plus its simple to setup, and its lockable lid makes it a secure solution to allow it to be used on a range of different projects and locations.

The package also includes onsite delivery and setup as well as a full days training (for 1-6 people) on how to use the equipment and common radio tasks. Additional training is available at the discounted rate of £150 per day plus travel and accommodation.

Lease Option: Now available as a low cost quarterly lease option. Please contact sales@psquared.net for quotation.

Music Download Service

We now offer a music download service to provide you with a safe, legal source of music from all genres and eras, for a small monthly subscription fee. This service provides access to the complete 'I Like Music' database which includes every UK top 40 hit since the chart started in 1952 and most US 100 Bill Board hits for the same period so whether you need some Elvis or the latest Timberland, you can be sure you will have it in minutes.

The database is used by the BBC to source music for television radio productions.

- **Search and download from a database with millions of songs**
- **All songs are top quality, uncompressed WAV files**
- **Download up to 50 new tracks each month**
- **Low cost monthly fee of £25 (equivalent to just 50p a track)**
- **Pay annual and get an extra 60 downloads free**

In partnership with

Music downloaded from this service is intended for use on your radio station only. You will still need to obtain the necessary PPL and PRS licenses for any type of web, speaker or FM/AM broadcast. Service only available to educational establishment and community radio stations.

On-Site Installation FAQ

What does on-site installation mean?

The On-Site Installation option covers the delivery and assembly of your studio package in a fixed location at your site. We will unpack and assemble your studio system, test all audio connections and ensure the studio is ready to use.

What is the mileage charge?

For all installation and on-site visits we charge a fixed mileage rate of 50p a mile based on a round trip from Hull to your site. This covers delivery of your equipment and travel for the installation / training engineers.

What do I need to do prior to installation?

You should ensure that adequate power (usually a double socket will be enough), telephone (if needed) and network points are available prior to your installation date. You should also think about studio positioning so that you can instruct the installation engineers where you would like the equipment.

What will happen on the day?

If you have selected the onsite installation option then the engineer(s) will travel to your site on the morning of the installation and aim to arrive around lunch time. Upon arrival, the engineers will briefly assess the location of the studio before commencing the installation. In most cases, the installation will only take a few hours (as it is pre-built and configured), however, more complex installations may require more time but your sales advisor should be able to provide this information at point of order.

If you would prefer the engineers to start earlier in the morning then we can arrange for them to travel down to your site the night before, however, there will be an additional charge for overnight accommodation which would normally be around £130 (for two engineers).

Once the technical installation is complete, the engineers will briefly outline the equipment installed but they will probably not have time to offer any specific training.

Can I have my training onsite as well?

Your studio package includes a day's training on both Myriad and radio studio equipment, but this is typically based at our East Yorkshire training facility. If you would prefer your training to be at your site then you can extend the on-site installation to include a second day of training for an additional £130 to cover the extra nights' accommodation for the engineers.

If you are not planning to include on-site installation (i.e. for a portable package) but you still want on-site training then we can do this but there will be a charge for mileage to your site plus a charge for a hotel (the night before – typically £65 for a single engineer) to allow the training to start promptly in the morning.

Notes

Hotel Accommodation required for the engineer, when more than 2 hours journey time from P Squared Ltd

Please note that a 'Day On-Site Engineering' normally means a maximum working day of 8 hours including travel time to site (but not usually the return leg of the journey). As the situation dictates, engineers can (at their discretion) work a maximum of two additional hours in any given day but only on a maximum of two consecutive days. These limits are imposed to ensure a safe and fair working environment for our employees.
